Dear Sirs,

I have read the GREEN BOOK . The world is living a great revolution with the Herviborous fishes , like tilapia. My company has a project of Tilapia fishfarming in the Canary Island very attractive with high technology from Israel. Anybody in the Canary Island give us any help to start with this kind of farm , because there is no rules about fishfarms on land. My question is , who could help me to start developing this and make pressure in the goverment of the Canary Island to give us the authorizations?

Best Regards,

J. Antonio Betancort Perdomo
