Subject: DO Whatever

will save the fish stocks around the E.U. countries. Do whatever it takes to assure that new generations will have fish too fish for. Protect and preserve the wonderful diversity of living creatures in the E.U. Realm. A huge benefit could be received from such things as banning ALL unlicensed gill netting . Strick seasons and limits of catch. Another line of defense for the fish would be to to inspect , fish processing plants- and markets for restricted species. Not far from my home is a place that processes fresh pike during the closed season..... It is one thing to pass laws it is another to enforce laws.
