Dear

It is of the utmost importance to put an end to the totally counterproductive action of paying sums to African governments in exchange with fishing allowances inside their marine national coast.

This – beyond destroying all sealife with industrial fishing techniques – prevents local fishermen of sustainability : without resources, they come in EU as clandestine immigrants or become pirates !

Besides, quota should be granted only to sustainable fishing with small and medium boats, and floating fishing factories should be forbidden as they empty seas and sea bottom floors in a few years
