Programme Summary

Poland - Programme for the European Maritime Fisheries and Aquaculture Fund

2021-2027 - CCI 2021PL14MFPR001

1. Programme overview

Total allocation: EUR 731 982 790
EU contribution: EUR 512 387 953
National contribution: EUR 219 594 837
Poland intends to implement all EMFAF Priorities (1, 2, 3 and 4).

island and inland areas and supporting the development of fisheries and aquaculture communities

4. Strengthening international ocean governance and contributing to the safety, cleanliness, protection and conservation of seas and oceans

4.1. Strengthen the sustainable management of seas and oceans by promoting knowledge of the sea, maritime surveillance or coastguard cooperation

5.1. Technical assistance pursuant to Art. 36 sec. 4 CPR

2. Programme Summary

The main objectives of the programme are to support the profitability of the fisheries sector through structural adjustment, diversification and productive investments, to stimulate modernisation and innovation, and to address environmental concerns.

The Polish programme is in line with the EU Green Deal, Farm to Fork and Biodiversity strategies. Within the above objectives Poland aims to support the structural adjustment of the fishing sector in the context of severely declined fish stock in the Baltic Sea, and by supporting their resilience and profitability through investments in human capital, diversification of activities.

Improving the protection of the environment and the state of fish stock is an important objective of the Polish programme as sustainable use of fish stocks and good environmental status are a prerequisite for profitable fisheries. This includes support for the effective management of Marine Protected Areas, for collecting lost fishing gear, restoring the continuity of rivers and natural spawning grounds and use of more selective fishing gear.

Adaptation to climate change will be supported by investments in more energy efficiency and use of renewable energy sources, and also through a more efficient use of natural resources, reduced use and pollution of water, reduction of waste and (plastic) packaging materials, which will directly contribute to implementing the circular economy in practice.

With the exception of the effective application and implementation of the Charter of Fundamental Rights, the Horizontal Enabling Conditions are considered fulfilled for the EMFAF programme.

The Polish authorities have included a provision that will allow them to make use of the EMFAF crisis mechanism to mitigate the impact of major market disruptions in future.

Contribution to EU horizontal priorities:

Resilience: The Polish programme addresses resilience building as a main objective for the fisheries sector, which they intend to support to restructuring of the fleets, upgrading skills and training in support of generational renewal, diversification of sources of
income and investments health, safety and better working conditions, increased energy efficiency of vessels, cooperation between science and fishermen, temporary cessation in the event of environmental disaster or health crisis and improving working conditions in fisheries and aquaculture. The programme will also support producer organisations, which have an important role in supporting small-scale coastal fisheries in particular.

**Green transition:** The Polish programme will support types of actions which contribute to green transition such as climate adaptation investments in fisheries, diversification of activities for fishermen, environmental conservation and restoration measures, development of more energy and resource efficient aquaculture production and processing, investments in more CO2-efficient technology and selective fishing gear. Furthermore, actions supporting research and innovation in the aquaculture sector will also support technologies that have positive effects for the environment and climate. Support for engine replacement in view of more energy efficient fishing vessels is also envisaged.

Based on the budget allocations, the contributions to fight climate change represents 66%, to protect the environment represents 73% which are both well above the 30% target set by the EMFAF Regulation. The contribution to biodiversity represents 39% of the total EU allocation, also well above the targets of 7% and 10% of the MFF.

**Digital transition:** The Polish programme supports digitalisation especially for modernising and increasing the efficiency of fisheries control and data collection.

**Added value of public investment:** The programme aims at supporting a structural adaptation in the fisheries sector and promotes the green transition in view of long term resilience and sustainability. Poland does not envisage the use of Financial Instruments from the start of the programme, but will undertake an ex-ante assessment by end 2023 in view of their potential introduction for Specific Objectives 1.1, 1.2, 2.1 and 2.2.

### 3. Partnership Agreement

The Polish Partnership Agreement was adopted on 30 June 2022, amounting to EUR 76 billion in cohesion policy funding for the period 2021-2027.
